

# Задание 2

## Отчёт

### по CUDA ADI3d

Ши Хуэй shihuicollapsor@gmail.com

#### 1. Постановка задачи

1. Программа должна автоматически определять доступный объём памяти на GPU и выбирать максимально возможный размер сетки (L), который поместится в эту память.
2. Нужно реализовать возможность запуска на CPU и GPU, а также режим сравнения, чтобы проверить, что результаты расчётов одинаковы.
3. Редукцию (вычисление максимального значения ошибки eps) необходимо распараллелить. В программе уже используется атомарная операция на GPU, но она может быть оптимизирована.
4. Создайте Git-репозиторий с вашим кодом. В нём должен быть:
  - Makefile, который позволит собрать и запустить программу на любом сервере с GPU.
  - Возможность выбрать, на каком устройстве (CPU или GPU) будет выполняться программа.
  - Режим проверки совпадения результатов между CPU и GPU.
5. Проверьте производительность программы:
  - Сравните время выполнения программы на GPU и CPU.
  - Постройте таблицу или график, показывающий ускорение программы на GPU по сравнению с последовательной версией на CPU (с максимальными опциями оптимизации).

#### 2. Формат командной строки

```
nvcc adi3d_cuda.cu -o cuda2
```

#### 3. Спецификация системы

- Operating system : Linux 6.8.0-45-generic
- Vendor string and code : GenuineIntel (1, 0x1)
- Model string and code : Intel(R) Core(TM) i7-10750H CPU @ 2.60GHz (165, 0xa5)
- CPU revision : 2.0000000
- CPUID : Family/Model/Stepping 6/165/2, 0x06/0xa5/0x02
- CPU Max MHz : 5000
- CPU Min MHz : 800
- Total cores : 12

- SMT threads per core : 2
- Cores per socket : 6
- Sockets : 1
- Cores per NUMA region : 12
- NUMA regions : 1
- Running in a VM : no
- Number Hardware Counters : 10
- Max Multiplex Counters : 384

#### 4. Описание алгоритмов

Для этой программы был написан файл Makefile.

Введите следующую команду в терминале:

***nvcc adi3d\_cuda.cu -o cuda***

После этого мы войдем:

***make run\_cpu***

Программа будет запущена на CPU, и результаты показаны справа в таблице ниже.

***make run\_gpu***

Программа будет запущена на GPU, и результаты показаны слева в таблице ниже.

#### 5. Заключение

***collapsor@collapsor-G5-5500:~/Desktop/CUDA\$ nvcc adi3d\_cuda.cu -o cuda***

***collapsor@collapsor-G5-5500:~/Desktop/CUDA\$ ./cuda***

***Free memory: 1106247680 bytes***

***Total memory: 6020661248 bytes***

***Dynamic grid size set to: 332 x 332 x 332***
